

The OPTIfarm-FMS Service

"where your people and our people come together to enhance productivity and welfare"

OPTIfarm

Farm Management Support

The OPTIfarm - FMS has been specifically designed to be the perfect addition to our AMS service. Combining our services provides a unique opportunity for you to provide tailored support direct to the farm manager.

Our Farm Management Support advisors are trained to translate the data into practical improvements on the farm. Guiding your farm manager every step of the way.

Our Farm Management Support advisors continuously investigate how to improve your management process even further. They do this by evaluating the farms data every 90 minutes, creating important insights and working together with the farm staff to action this information.

In this way they gain valuable insights, which help you to manage the poultry farm more efficiently and profitably.

Managing a large flock of live birds is not an easy task. The collection, recording and evaluation of data is key for your business and the farm.

Cost effective for the farmer and for you. With our FMS service you can select farmers who you think may benefit from an extra helping hand. Alternatively they can request this on top of the AMS service to get even more guidance with 'hands-on' support on daily activities at the farm.

In addition to our AMS service:

- ✓ Setting computers / correcting settings
- ✓ Technical advice on improving performance
- ✓ Ongoing optimisation advice
- ✓ Dashboard access for the farmer
- ✓ Daily reports and end of crop report to farmer
- ✓ Can be booked quarterly

 Ask us about our Technical Consulting Service for the ultimate poultry business optimisation.

Optimising, Sustaining and Advancing poultry production & welfare, globally, through innovative 24/7 human and digital assessments
